The second approach converts the pack state estimation problem into a 2-cell estimation problem. To be specific, the first fully charged cell and the first completely discharged cell are the worst cells that are used to determine the state of the battery pack [9], [13], [14].

Book-keeping estimation method uses battery discharging current data as input. This method permits to include some internal battery effects as self-discharge, capacity-loss, and discharging efficiency. Two kinds of book-keeping estimation methods have been employed: Coulomb counting method and modified Coulomb counting method. 3.2.1.

Voltage: Overcharging or undercharging a battery can decrease the capacity over time. When the current capacity of a battery can be accurately measured, it allows for a direct determination of the SOH. However, measuring the capacity of a fully charged battery pack for a moving EV is impractical [103]. Therefore, the method can only be employed to determine effective capacity in controlled environments, such as laboratories [14].

You can immediately see that the high capacity 200Ah cell produces a minimum pack capacity ~138kWh at ~800V. The increments in pack capacity are also 138kWh. The small 5Ah cell allows a more granular approach to pack sizes, the downside is the number of cells that are used and hence the complexity of items such as the busbars.

The battery pack based on the individual DP (dual polarization) battery model is established to verify the ISCr detection method. The 1-1000 O s ISCr (the early stage ISCr) can be effectively detected within 1-125 s. The SLCT provides the possibility of new battery pack designs and new battery management methods.

The State of Charge (SoC) of a battery cell is required to maintain it's safe operation and lifetime during charge, discharge and storage. However, SoC cannot be measured directly and is estimated from other measurements and known parameters. This leads to errors in the estimated SoC and that means it is not possible to fully exploit the full capability of the cell.
