Flat roof systems take these advantages a step further. Flat roofs tend to offer a larger surface area for solar panel installation compared to traditional pitched roofs, allowing for more panels to be installed. More panels mean more solar energy, translating to higher savings and a shorter payback period for your investment.

Solar battery storage is the ideal addition to a solar panel system. It can hugely increase your savings from the electricity your panels generate, allow you to profit from buying and selling grid electricity, protect you from energy price rises and power cuts, and shrink your carbon footprint.

Flat Plate Collector Solar Flat Plate Collectors for Solar Hot Water. A Flat Plate Collector is a heat exchanger that converts the radiant solar energy from the sun into heat energy using the well known greenhouse effect. It collects, or captures, solar energy and uses that energy to heat water in the home for bathing, washing and heating, and can even be used to heat outdoor swimming ...

This announcement is really only relevant for commercial flat-roof installations, given the unsuitability of residential flat roofs - as confirmed by Solar Energy UK CEO Chris Hewett: "The potential of installing solar power on large commercial rooftops is vast, its prospective capacity having been estimated at 15GW across the country.
