Lithium batteries can be discharged at 1C (for example, 100 amps for a 100Ah battery). Discharging your battery at a higher rate than what is recommended will increase the heat in battery cells. As a result, your battery will drain quickly. For instant, if you're running a 100A load on a 100Ah battery, it will last 35-40 minutes instead of 1 hour. Note: If the load ...

While it's not harmful to occasionally charge lithium batteries to 100%, it's generally better for battery longevity to keep them between 20% and 80% charged. Constantly keeping a lithium battery at 100% charge can slightly reduce its lifespan over time. What voltage is 0% lithium ion? The voltage at 0% charge for a lithium-ion cell is typically around 2.5V to ...
