One of the biggest issues with solar energy is that it is inconsistent over days and over seasons. Many startups have focused on trying to smooth energy supply over the day -- saving up energy during the day for use during the night-time or outside peak hours. But few have tackled interseasonal storage of solar energy.

What is commercial battery storage? Solar batteries, a key component in industrial battery storage, are large energy storage units typically found outside a building that charge up during sunny periods if linked up to a solar PV system, or during the night from the grid if there are low energy demands. This makes them an excellent option for commercial battery storage in the UK.

PV storage units close the gap between supply and demand. This helps to increase self-consumption and reduces energy costs. ... the charging status of the energy storage unit, and the current power consumption in the house.
