DC charging piles have a higher charging voltage and shorter charging time than AC charging piles. DC charging piles can also largely solve the problem of EVs' long charging times, which is a key barrier to EV adoption and something to which consumers pay considerable attention (Hidru et al., 2011; Ma et al., 2019a).

AC charging piles take a large proportion among public charging facilities. As shown in Fig. 5.2, by the end of 2020, the UIO of AC charging piles reached 498,000, accounting for 62% of the total UIO of charging infrastructures; the UIO of DC charging piles was 309,000, accounting for 38% of the total UIO of charging infrastructures; the UIO of AC and DC ...
