In this example, the removal of non-functioning pads (left) allows the copper pour to fill more of the board

than in the version where the non-functioning pads are kept. If your PCB will be optically inspected prior to shipment, unused pads have another disadvantage: non-functional pads are optically inspected just like their functional counterparts.

The film capacitor is a non-polarized capacitor and its dielectric is made using thin plastic films. These plastic films are sometimes metalized and are available in the market under the name "metalized capacitor". These ...

Where E is the electric field, F is the force exerted on a particle introduced into the field and q is the charge of the particle. The unit for electric field is volts per meter [V·m-1] or newtons per coulomb [N·C-1]. Q Factor The quality factor or Q factor of a capacitor, represents the efficiency of a given capacitor in terms of its energy losses.
