The Public Utility Regulatory Policy Act of 1978 (PURPA) requires power providers to purchase excess power from grid-connected small renewable energy systems at a rate equal to what it costs the power provider to produce the power itself. Power providers generally implement this requirement through various metering arrangements.

Because they can operate while the main grid is down, microgrids can strengthen grid resilience, help mitigate grid disturbances, and function as a grid resource for faster system response and recovery. Distributed Energy Resources. Solar DER can be built at different scales--even one small solar panel can provide energy.

NAIROBI, February 27, 2023 - Solar mini grids can provide high-quality uninterrupted renewable electricity to underserved villages and communities across Sub-Saharan Africa and be the least-cost solution to close the energy access gap on the continent by 2030. Climate action efforts can tap solar mini grids that offer a lower greenhouse gas emission alternative compared to diesel ...

Solar panels generate on average 42kW over a day (peak is 60kW but at times they produce less/none), so divide your power use in MW by 0.042, that gives you the number of solar panels required to provide on average enough electricity.
