generation tests. While these panels didn't perform quite as well as the top performers, they still generated a high amount of charge over one hour.

The batteries provide 12V direct electricity while most domestic equipment runs on 110V or 220V alternating current. The power inverter transforms 12V DC to 110/220V AC, which is compatible with our appliances. When there is no solar power available, some power inverters can charge the batteries when linked to a 110/220V AC source.
