7. Avoid Storage Drains: To prevent any energy drain during storage, ensure that the battery terminals are not in contact with any conductive materials or surfaces that could cause short-circuits. Place the batteries in a non-conductive container or use individual battery storage cases to minimize the risk of accidental discharge.

The mobile charging station system integrates lithium batteries and charging piles, which are used for emergency rescue of electric vehicles on the road. It is equipped with energy storage batteries with different battery capacities and outpowers, and supports various charging standards such as CCS1/CCS2 and GB/T.

Battery Discharge: In conditions of inadequate natural energy, the system activates battery discharge to sustain power loads. Should the battery's energy fall to 30% without recovery in natural energy, it then transitions to grid supply. This functionality is key in managing the PV ESS system, enhancing the interplay between EV and ESS.
