This controller regulates high voltage to match that of a battery bank without resulting in power loss. However, MPPT controllers tend to be more expensive (by approximately \$200) than Pulse Width Modulation (PWM) controllers.

If you need to use AC power from your battery or solar panels, you'll need an inverter. It converts DC power from the battery or solar panels to usable 110/120V AC power that you can use with household electronics. The first step is to select an inverter that is compatible with other components in the solar power system.

The efficiency of energy conversion depends mainly on the PV panels that generate power. The practical systems have low overall efficiency. This is the result of the cascaded product of several efficiencies, as the energy is converted from the sun through the PV array, the regulators, the battery, cabling and through an inverter to supply the ac load [10], [11].

photovoltaic (PV) technology has become an increasingly important energy supply option. A substantial decline in the cost of solar PV power plants (80% reduction since 2008) 2 has improved solar PV's competitiveness, reducing the needs for subsidies and enabling solar to compete with other power generation options in some markets.
