The system is also composed by a solar panel, a DC/DC converter and the load. The converter is responsible for charging the battery from the solar panel, and also for providing power to the load by discharging the battery. If the battery's state of charge is low, power can be transferred to the load if it is available from the solar panel.

This is NOT what you need to look for. Look on the back of the pot and look for the voltage requirement...should say something like 110V or 100-240V. If you only see the first one, then your pot will NOT work in Europe without a transformer (not a plug converter). If you see a range like 100-240V, then all you need is a plug converter.
