Both single-layer and multilayer ceramic capacitors are commonly used in RF/microwave circuits, attractive for their small size for use in surface-mount electronic designs. The two types of ceramic capacitors are often available from the same manufacturer, which begs the question: Why use one type or the other?

The objective of this booklet is to provide a basic understanding of ceramic chip capacitors. This manual contains information on dielectric materials, electrical properties, testing parameters, ...

In electrical engineering, a capacitor is a device that stores electrical energy by accumulating electric charges on two closely spaced surfaces that are insulated from each other. The capacitor was originally known as the condenser, [1] a term still encountered in a few compound names, such as the condenser microphone is a passive electronic component with two terminals.

Multi-layer ceramic capacitors or multi-layer chip capacitors (MLCC) are one of the most commonly used types with well over 100 billion being used every year. Ceramic capacitors are generally made with very small capacitance values that ...

In the same way, the Single Layer Ceramic Capacitor (SLCC) consists of one dielectric layer. The ceramic is covered with an adhesive layer of, for example, chrome nickel ...

1 Features of TDK multilayer ceramic chip capacitors The electrical characteristics of multi-layer ceramic chip capacitors are essentially the same as disk-type capacitors since the same ceramic dielectric principles apply. However, to provide large capacitance, the laminated ceramic-chip capacitor can be made with a ceramic dielectric

KYOCERA AVX offers a complete line of Single Layer Ceramic (SLC) Capacitors with dielectric constants ranging from 14 (NP0) to greater than 30,000 (X7R).

Principle of Single Layer Ceramic Chip Capacitor

One early decision that circuit designers must make is to determine if a single-layer capacitor (SLC) or multi-layer ceramic capacitor (MLCC) is the right fit for their application needs. At a high-level, these capacitor types seem similar as both SLCs and MLCCs can be used for charging and storing, filtering, or bypass functions in a circuit.

Single layer ceramic capacitors are similar in construction to ceramic multilayer capacitors but have only one layer of insulating material instead of multiple layers. The simple parallel plate structure has advantages over multi-layer capacitors up to gigahertz frequencies due to its low inductance and low effective series resistance (ESR).

In the same way the Single Layer Ceramic Capacitor (SLCC or just SLC) consists of one dielectric layer. The ceramic is covered with an adhesive layer of, for example, chrome nickel as a base for copper electrodes. ... Ceramic chips for surface mounting looks in principle like the one in Figure C2-74.
