The cylindrical lithium-ion battery has been widely used in 3C, xEVs, and energy storage applications and its safety sits as one of the primary barriers in the further development of its application.

Here, cycling effect is not considered, for the maximum strain of the battery shell during cycling is 0.35% [28] which is in elastic stage and is recoverable, i.e., cycling of the battery does not affect mechanical performance of battery shell. All the tests were conducted at the room temperature since batteries usually work at 30-40 °C during electric vehicle ...

Lithium's end-uses can be broadly split into three categories: automotive battery, other battery, and non-battery. Major end-uses for lithium comprise lithium-ion batteries (LiBs) for electric vehicles (EVs), energy storage and other electronic devices, such as mobile phones, laptops, tablets and power tools, primary (non-rechargeable) batteries for electronic devices, and non ...
