**HIGH PERFORMANCE.** Prefab techniques, like using structural insulated panels (SIPs), are excellent for building zero energy and zero carbon homes. Factory built components can be precise and extremely well insulated. Therefore, they demand less energy than traditional stick-built, and have lower CO2 emissions.

The most common solar installation (often called PV or Photovoltaic) relies on a collection of solar panels and an inverter to convert the direct current (DC) electricity from the panels to alternating current (AC) that is required by the lights, appliances and other electrical devices in your cabin. A system large enough to completely power a cabin is still a sizeable investment, ...
