Today, energy plays a key role in the development and progress of societies. Most of the energy is produced from fossil sources such as coal, oil and natural gas, which will inevitably be exhausted in the near future (Hilal M.S. Al-Maamary et al., 2017). The burning of fossil fuels also results in several pollutants, including carbon dioxide and methane gases, ...

Dust accumulation significantly affects the solar PV(Photovoltaic) performance, resulting in a considerable decrease in output power, which can be reduced by 40% with the dust of 4 g/m². Understanding the dust deposition characteristics of PV modules can provide theoretical support for selecting dust cleaning methods and formulating cleaning strategies.

Dryers are categorised into fossil fuel dryers, electric dryers or solar energy dryers following their heating sources. Conventional mechanical dryers commonly rely on heat from the combustion of fossil fuels and biomass resources [13], which contradicts the goal of renewable and sustainable development. More than 85% of the thermal dryers are conventional ...

As is generally known, fossil fuels take millions of years to form. The world's heavy reliance on non-renewable energy sources in its energy matrix leads to a depletion of reserves as consumption surpasses production [1]. The most alarming aspect of this reality is the environmental impact it carries, manifesting in numerous problems such as global warming ...

[1] The rational design of Ti-O-based nanocomposites is of great importance for achieving efficient solar energy conversion and storage. Herein, novel one-dimensional (1D) K₂Ti₆O₁₃/TiO₂ core-shell nanobelt composites were fabricated by a controlled hydrothermal method using 1D K₂Ti₆O₁₃ nanobelts as precursors. T

It was approximately 11 W, which comprises 5 W for idling, 6 W for control, and a negligible amount for the panel for our high voltage source under operational conditions of 8 kVp-p and 1 Hz rectangular voltage [33]. The total energy consumption of this system is extremely low as compared to the typical output energy of a solar panel.
