An examination is conducted of the wind coefficient commonly adopted for evaluations of the external heat transfer from the cover glasses of solar collectors subjected to a range of windspeeds. The wind coefficient, derived from McAdams (1954) and in turn from Jurges (1924), includes a radiation term.

The solar thermal collector is a prominent renewal energy method for solar energy harvesting to fulfil energy demands [6]. A solar collector is a heat exchanger device used to convert solar irradiance into thermal energy [7]. The solar collector can be mainly categorized into three groups- Flat plate collectors (FPC) [8], Evacuated
