Short circuit current of a solar cell is not quite like anything else. The solar panels are just long chains of photo-diodes, albeit rather large area ones, so very slow compared to rectifiers. And diode-like they have a highly non-linear current voltage characteristic, that depends on the light level.

In addition to solar panels and inverters, a 3-phase solar system also includes a wiring system. This system is used to connect the solar panels to the inverter and to distribute the AC electricity to various electrical loads. The wiring system must be carefully designed and installed to ensure optimal efficiency and safety.
