include both natural and forced convection. The free convection from the top of the PV panel is given as (Bejan and Kraus, 2003):
$$Nu = 0.14 Gr^{1/3} + 0.56 (Gr Pr)^{1/4}$$

With a flat roof, panels need to be tilted towards the sun for optimal production, so your solar installer will need to install slanted metal racking to prop up your panels. Often these systems don't need to be attached to your roof - many flat roof installations utilize a ballast system instead of the standard penetration mounting that ...
