If, on the other hand, you have a "stiff" power source like a regulated power supply, the current will go far above the rated output. Even if the power supply has fuses or other protection, the problem, as you suspected, is that the peak current can damage the supply even if the average current is within limits.

A grid-connected solar system is an arrangement where a solar power system is connected to the electrical grid of an area. This type of system generates electricity through solar panels and can be used for a variety of purposes, from powering homes and businesses to contributing to the overall energy production of a region.
