A 12V charger delivering 10A has a charging power (watts) of 120W. 12V * 10A = 120W. The same 10A charger on a 48V battery can deliver 480W. 48V * 10A = 480W. The price of a 12V or 48V charger will be around the same at 10A. But the charging speed is 4 times faster! To reduce the cost of your battery charger, increase your battery ...

CR"s experts pick the best portable solar panels and battery chargers to power devices like phones and laptops, plus back-up batteries and power stations.

We tested a few solar chargers that have DC power outputs, and these performed the best when hooked up to the DC power stations we used in our 100+ watt solar panels test. The FlexSolar 40W performed better when using its DC charging output, generating 2000 mAh in an hour compared to 972 mAh in an hour when using the USB-A ...

Logically, any voltage over the battery volts at any given time will cause current to flow into the battery and charge it up. During this process, the charging voltage is regulated to ensure efficient and safe charging, and this is the crux of the matter - direct solar panel connection is normally unregulated.. 12 Volt Lead Acid Battery Open Circuit ...

)The house batteries are constantly re-charged by a large solar system, etc.) So I simply moved that 1 wire over

a few inches to the engine battery connect solenoid so that what ever power the 10w panel can put out now goes directly to the engines battery - which it helps keep charged OK as long as we have sufficient solar hitting the panel.
