When you are building a new home or office, installing solar-powered LED lighting makes a world of economical sense. Integrating indoor solar LED lights with your existing electrical system maximises the benefits of solar lighting systems by allowing it to double as LED house lights. This can cut your energy costs related to lighting down to ...

We begin with one of the essential attributes of solar lights, which is the motion detector. The PIR motion sensor is built into the system, ensuring motion detection from 26 feet away or at an angle of 120 degrees. As a result, the lights come on for a maximum of 30 seconds, but the duration is extended if it detects movement again. What's more, it's made from ...

Most indoor home lighting should provide a softer, warmer light, typically around 3200 to 4500 Kelvin, and have a CRI of around 60. This provides good lighting levels while also not being so bright to wash out the surrounding area if ...

There are two general types of solar power systems, off-grid and grid-tied. When installing a solar panel system, this is one of the first decisions an indoor grower will need to make. A grid-tied system means the solar panels are directly tied in with the conventional power grid that services the home or building.
