Solar powered systems and line powered UPS systems can provide both the power and reliability to remotely operate a valve when the need arises. Energy Reserves & Back-Up In reviewing energy requirements first, a typical remote valve actuator site will have some sort of communication, whether it's licensed radio, cellular, or satellite.

In a solar-powered drip irrigation system, all the powered components draw their energy from a modest, dedicated solar power system. This would typically consist of a single solar panel, a charge controller, and a battery depending on the specifics. In most cases, the need for a solar power source would indicate a lack of a municipal water supply.
