A 1-farad capacitor can store one coulomb (coo-lomb) of charge at 1 volt. A coulomb is  $6.25 \times 10^{18}$  (6.25 \* 10^18, or 6.25 billion billion) electrons. One amp represents a rate of electron flow of 1 coulomb of electrons per second, so a 1 ...

In the SI system, capacitance is measured in Farads (F). One Farad represents the capacitance of a system when one coulomb of electrical charge is stored per volt of potential difference (voltage) across a capacitor. In simpler terms, it quantifies the ability of a capacitor to store electrical charge relative to the voltage applied to it.

The basic unit of capacitance is the Farad, although most capacitors have values well below a Farad - the submultiples below being the most common: microfarads,  $\mu\text{F}$ , a millionth of a Farad,  $10^{-6}$  ; nanofarads, nF a 1000 millionth of a Farad,  $10^{-9}$  ; picoFarads, pF a million millionth of a Farad,  $10^{-12}$  ; Sometimes capacitors can be marked in two ...

In the meter-kilogram-second system of physical units, the farad capacitors is a measure of electrical capacitance (the capacity to store an electric charge). It is named in honor of the English scientist Michael Faraday. When one coulomb of energy alters the potential between the plates by one volt, the capacitance of a capacitor is one farad.

In modern electronic devices, components such as capacitors are miniaturized and can fit onto a single chip. However, even with these small sizes, the capacitance values are still relatively small, typically ranging from picofarads to microfarads. the farad is a big unit because it represents a significant amount of capacitance and is derived from SI base units that are quite large.

Moving charge from one initially-neutral capacitor plate to the other is called charging the capacitor. When you charge a capacitor, you are storing energy in that capacitor.

A capacitor with a capacitance of one farad can store one coulomb (C) of charge per volt of potential difference between its plates. Submultiples of the farad, such as the microfarad and the picofarad, are more convenient units in practice. To give you an idea of how large one farad is, consider the following examples:
