

## Switching capacitor contactor price

The SINOVA 3MT7 Capacitor Duty Contactor is a specially designed contactor for switching 3-phase, single, or multiple step capacitor banks in power factor correction applications, that suppresses high switching starting currents generated by power capacitors.

Suppression of voltage transients during switching Protection for both capacitor and contactor Extended capacitor and contactor life . Contactors without pre-charge resistors (K3-..A.. type) Capacitors with series reactors (for tuning or detuning) have lower peak inrush current than for systems that do not include reactors.

The contactors for capacitor switching are composed of a conventional contactor as well as extra auxiliary contacts and wires (resistance wires). Function. The main function of the capacitor contactor lies in the auxiliary contact, which is very different from the conventional contact. The 33 and 34 contacts on the auxiliary contacts of the ...

Therefore, contactor for capacitor bank switching must be designed to withstand: o Permanent current that can reach 1.5 time the nominal current of capacitor bank. o Short but high peak current on pole closing. Hence, capacitor duty switching device requires careful selection. It is always recommended to use

These special contactors offer several advantages for capacitor switching applications that include series-connected reactors: Safe switching (ON and OFF) of reactor/capacitor steps. Improved voltage quality made possible through chatter-proof switching operations; Extended capacitor life; Extended contactor life

## Switching capacitor contactor price

(>100,000 switching operations)

If a conventional power contactor is used for a capacitor switching application, the size of contactor will be more which will in turn increase the system cost. On the other hand, size of a special capacitor duty contactor will be less and so the total system cost for the same application. Hence, capacitor duty contactors are best suited for ...

UA75..RA 3-pole contactors for capacitor switching, can be used in installations in which the peak current far exceeds 100 times nominal rms current. The contactors are delivered complete with their damping resistors and must be used without additional inductances (see table below). ...
