

# The battery panel is broken and the light is not on what should I do

As with any other light fixture, solar lights can get broken or start malfunctioning, so you need to know how to fix them if there's a problem. Today, we'll provide you with a step-by-step guide for how to fix solar lights in 12 easy steps. Since there can be multiple problems, we will mention the most common ones and their solutions. The Most Common ...

It is highly recommended that you replace your battery if you think it is broken. Also, take good care of the battery. Do not overcharge it or let it sit idle. Remember to use quality batteries. And always remember battery voltage should be less than panel voltage. 3. Solution to Extreme Weather Condition

1. Mislabeled Breaker. This seems like a no-brainer, but it is an easy thing to overlook. Like I always say regarding troubleshooting, ALWAYS CHECK THE EASIEST, MOST OBVIOUS THING FIRST. It's easy to assume you're dealing with the right breaker, and yet you might end up on a wild goose chase because the labeling is incorrect!

A broken brake light switch is commonly associated with brake lights being stuck on. If the brake light switch shorts internally, it can cause the brake lights to stay lit, without the brake pedal being pressed. If left unchecked, this will cause your brake lights to burn out sooner than they should, and will slowly drain your battery.

You should also check to see if the battery connections are loose. The main connections are behind the battery cover. If the solar panel cables connected to the battery are loose, then it could cause the battery to ...
