OverviewApplicationsHistoryTheory of operationNon-ideal behaviorCapacitor typesCapacitor markingsHazards and safetyA capacitor can store electric energy when disconnected from its charging circuit, so it can be used like a temporary battery, or like other types of rechargeable energy storage system. Capacitors are commonly used in electronic devices to maintain power supply while batteries are being changed. (This prevents loss of information in volatile memory.)

Study with Quizlet and memorize flashcards containing terms like A capacitor _____, Capacitors are often used as "suppression capacitors." What does a capacitor suppress?, What does a capacitor store when it is electrically charged? and more.

Farad is a larger unit of capacitance. In practice, several smaller units are used to specify the capacitance of a capacitor. Some commonly used units of capacitance are as follows: Microfarad (μF): $1 \mu\text{F} = 10^{-6} \text{ F}$ Nanofarad (nF): $1 \text{ nF} = 10^{-9} \text{ F}$ Picofarad (pF): $1 \text{ pF} = 10^{-12} \text{ F}$...
