The conversion efficiency of a photovoltaic (PV) cell, or solar cell, is the percentage of the solar energy shining on a PV device that is converted into usable electricity. Improving this conversion efficiency is a key goal of research and helps make PV technologies cost-competitive with conventional sources of energy.

OverviewHistoryApplicationsDeclining costs and exponential growthTheoryEfficiencyMaterialsResearch in solar cellsThe photovoltaic effect was experimentally demonstrated first by French physicist Edmond Becquerel. In 1839, at age 19, he built the world's first photovoltaic cell in his father's laboratory. Willoughby Smith first described the "Effect of Light on Selenium during the passage of an Electric Current" in a 20 February 1873 issue of Nature. In 1883 Charles Fritts built the first solid state photovoltaic cell by coating...

Efficiencies vary based on the specific material used in the cells, but thin-film solar panels tend to be around 11% efficiency. Thin-film solar cell technology does not come in uniform sizes. The power capacity from one thin-film panel to ...
