For example, in our previous work, we reported 0.052 and 1.0 cm² ultra-thin OPVs with PCEs of 17.32% and 17.08%, respectively, by using ultra-thin Ag as transparent electrodes. ³ However, the high reflectivity of ultra-thin Ag endows low transmittance in the 650-1000 nm, which significantly influences the device's optical response. Although ...
