

What are the batteries inside wind power

In the coming decades, renewable energy sources such as solar and wind will increasingly dominate the conventional power grid. Because those sources only generate electricity when it's sunny or windy, ensuring a reliable grid -- one that can deliver power 24/7 -- requires some means of storing electricity when supplies are abundant and delivering it later ...

the output power characteristics including average value and standard deviation can be obtained for each turbine. As mentioned earlier, the individual wind turbines, not only may have the different average power but also have different turbulence level.

Just stick battery stacks inside the tower to charge when it can"t put the power on the grid, and draw down the power from the battery stacks when wind isn"t operating at 100% Battery back-up (or other "green" back-up where possible) may become a necessity in a reduced CO2 world, but it"s not cheap and simple.
