Figure (PageIndex{1}): The capacitors on the circuit board for an electronic device follow a labeling convention that identifies each one with a code that begins with the letter "C." The energy (U_C) stored in a capacitor is electrostatic potential energy and is thus related to the charge Q and voltage V between the capacitor plates. A ...

Till now we studied only resistive circuits. But there are other passive elements like Capacitors and Inductors, which stores energy. Capacitors and inductors are widely used in practical circuits. So we need to study their properties Capacitors A capacitor is a passive element designed to store energy in its electric field.
