I've just bought an Epson 7750 printer. I've accidentally done the initial set up and filled the ink cartridges up after. Now silly me after looking at instructions it says you need to put the ink in.. then plug the printer in and set it all up and then it'll give you the option to charge the ink.. anyone have any ideas how I can charge the ink now I've done the initial set up etc?

Grid-level large-scale electrical energy storage (GLEES) is an essential approach for balancing the supply-demand of electricity generation, distribution, and usage. Fig. 13 compares the evolution of the energy storage rate during the first charging phase. The energy storage rate q_{sto} per unit pile length is calculated using the equation below: $(3) q_{sto} = m \cdot c_w \cdot (T_{in\ pile} - T_{out\ pile}) / L$ where m is the mass flowrate of the circulating water; c_w is the specific heat capacity of water; L is the length of energy pile; T_{in} ...

light starts flashing to begin charging the ink. Ink charging takes approximately 20 minutes. Ink charging is complete when the power light stops flashing. 3 seconds 20 minutes Note: The ink bottles included with the printer are designed for printer setup and not for resale. After some ink is used for charging, the rest is available for printing.

He did not know about ink charging and tried to use it right away. Then it wasn't printing properly, so not knowing about the charging he tried to clean it up. He opened it, blew on the print heads? (the tiny bump under the cartridge inside the printer) with a kind of a pump (the video he referred to used a tube we didn't have) and put it back together.

Energy storage is also valued for its rapid response-battery storage can begin discharging power to the grid very quickly, within a fraction of a second, while conventional thermal power plants take hours to restart. This rapid response is important for ensuring the stability of the grid when unexpected increases in demand occur. Energy storage also ...
