Here are five things to know about hydrogen and fuel cells. 1. Hydrogen is the most abundant element on earth. Hydrogen is an alternative fuel that has very high energy content by weight. It's locked up in enormous quantities in water, hydrocarbons, and other organic matter.

Most electric cars are powered by lithium-ion batteries, a type of battery that is recharged when lithium ions flow from a positively charged electrode, called a cathode, to a negatively electrode, called an anode. In most lithium-ion batteries, the cathode contains cobalt, a metal that offers high stability and energy density.
