To replace with the same batteries I am looking at \$1100-\$1200. Cheaper Duracell batteries can be had for about \$850. For \$2000 I can upgrade to lithium batteries that claim to last for 5x the charge cycle of lead acid batteries, are maintenance free, weight 300 lbs less which will help performance of the cart.

Where can I buy aftermarket lead-acid batteries

If you don't, we can't help you with dating advice -- or advice about dating your mechanic -- but we can help you find the best place to buy a battery. Here's How We Came Up With This List

Unlike lead-acid batteries, they deliver full power even as the energy level is depleted in their cells. Lead-acid batteries need to maintain at least a 50% charged level. This allows them to deliver any power to your RV. But lithium batteries can be depleted up to 85% without damaging the batteries or diminishing the available power.

The advantages of Lithium Iron Phosphate Batteries are you can draw them down to almost 100% of amp hours, quality lithium batteries will have a 10+ year warranty, and they will cycle more than 3,000 times. They also do not gas, so they can be put almost anywhere. The disadvantage is the cost, which can be 3-4 times more than FLA.

Check out the deal on 12 Volt 2.9 Ah Sealed Lead Acid Rechargeable Battery - F1 Terminals at BatteryMart . Where can I buy aftermarket lead-acid batteries

The current Model 3, Model Y 12V battery is a sealed maintenance free (MF), deep cycle, flooded lead acid battery. The battery has a rated capacity of 45Ah, i.e. should be capable of delivering 1 amp into a load for 45 hours or 2 amps into a load for 22.5 hours, etc.

Since the original lead acid E90 battery tends to last 5-6 years, I think for most people a regular replacement lead acid battery probably works just fine. If you are not "regular" and tend to live in a very cold climate, leave your car stationary for over a week, or need lots of non-engine running electrical capacity, AGM is probably a good move.

Install the lead-acid battery hold down and use a 10mm socket to tighten the nut that secures it to the 12V battery. Torque the nut to 6 Nm (4.4 ft-lb). Reconnect the first responder loop. Remove the protective caps from the positive (+) and ...
