The utilization of fuel cells (FC) in automotive technology has experienced significant growth in recent years. Fuel cell hybrid electric vehicles (FCHEVs) are powered by a combination of fuel cells, batteries, and/or ultracapacitors (UCs). By integrating power converters with these power sources, the FCHEV system can overcome the limitations of using them ...

The increase of vehicles on roads has caused two major problems, namely, traffic jams and carbon dioxide (CO₂) emissions. Generally, a conventional vehicle dissipates heat during consumption of approximately 85% of total fuel energy [2], [3] in terms of CO₂, carbon monoxide, nitrogen oxide, hydrocarbon, water, and other greenhouse gases (GHGs); 83.7% of ...

Energy storage is useful in balancing the demand and supply of electric power. The grid-level large-scale electrical energy storage (GLEES) is a process used to convert energy from a grid-scale power network into a storable form for later conversion to electricity . Many battery chemistries are either available or under investigation for grid ...
