When wiring two or more modules in parallel, you will need some additional equipment. If you're only using two modules, or two strings of modules, the easiest method is to use MC4 multibranch connectors. You obviously can't connect two male connectors or two female connectors together, so we use the multibranch connectors to accomplish that.

As is the case with most technical devices and systems, battery energy storage systems should also be checked and serviced regularly. Depending on the storage media used, this maintenance work can be reduced significantly to just visual inspections, the tight fit of screw connections, and so on - as is the case with common lithium-ion batteries.
