Ideally, an aeration system should be matched to your pond's size and shape, and run all season. If you need some assistance with planning your solar pond aeration system that is properly sized for your pond, talk with ...

Pond aeration today commonly uses three types of systems. The first as many people will recognize, is the pond fountain, which emits a decorative stream of water into the air. The second is a surfaced based aerator. This system isn't as eye catching but it moves a high volume of water, creating a dome like wall of water over the aerator.

If you have a large pond with 2,000 gallons of water, a 300 GPH solar-powered aerator will be the right choice. Solar Panel Size The solar panels absorb solar energy and convert it into electricity. A larger solar panel will be able to absorb more light. If you have a larger aeration unit or multiple units be sure to choose larger solar panels.

Lawn aeration is most effective during the growing season of your grass, allowing it to heal more quickly. You should aerate cool-season grasses like fine fescue and Kentucky bluegrass in early fall or early spring. Warm-season grasses like Bermuda grass and St. Augustine grass should be aerated in late spring or early summer at the latest.
