Most motor repair shops use a megger to test electric motor insulation, before and after repairing the motor! If it don't run at 120v at a slower speed smoothly without a load on the motor, it will most likely let out the smoke very fast if 240v is applied! The motor is most likely a AC (air conditioner) fan type motor, evaporator or condenser.

Capacitors are used to help start the motor and regulate its speed.
